Mailbox migration

To migrate a mailbox from a previous provider to Hosterra Email, use the mailbox synchronization feature.

Once you've entered the standard parameters (target and source mailboxes, server and port of your previous provider), run a first simulated synchronization (penultimate checkbox in the window). If the simulation was successful, you can activate your task and save it.

> The minimum synchronization frequency is 20 minutes. You must therefore wait until this time has elapsed for the first synchronizations to take place.
