

Mailbox migration

To migrate a mailbox from a previous provider to Hosterra Email, use the [mailbox synchronization feature](#).

Once you've entered the standard parameters (target and source mailboxes, server and port of your previous provider), run a first simulated synchronization (penultimate checkbox in the window). If the simulation was successful, you can activate your task and save it.

The minimum synchronization frequency is 20 minutes. You must therefore wait until this time has elapsed for the first synchronizations to take place.
