

Securing your account

You can increase the security of access to your Hosterra Email account by choosing to activate multi-factor authentication or switch to a passwordless authentication mode.

If you log in as a mailbox user, the security options are on the home page. If you log in as a domain administrator, you can access these options via the *System > User Settings* top menu.

Multi-factor authentication

To add a second authentication factor to your Hosterra Email account, go to your [mailcow administration interface](#). Choose your preferred method (Yubico, WebAuth or software OTP) and follow the configuration wizard.

FIDO2

To log in without passwords (using keys), click on the **Register FIDO2 device** button and follow the configuration wizard.
