

Spam sensitivity

To set the spam sensitivity for incoming mail, go to the **Spam filter** tab. Here you can set the score that determines whether mail should be accepted, marked as spam or simply rejected. You can also add sender addresses that should always be considered non-spam (white list) or spam (black list).

Whitelist

Whitelisted email addresses are programmed to **never** classify as spam. Wildcards may be used. A filter is only applied to direct aliases (aliases with a single target mailbox) excluding catch-all aliases and a mailbox itself.

Blacklist

Blacklisted email addresses to **always** classify as spam and reject. Rejected mail will **not** be copied to quarantine. Wildcards may be used. A filter is only applied to direct aliases (aliases with a single target mailbox) excluding catch-all aliases and a mailbox itself.

Remove

If your domain administrator has whitelisted or blacklisted a sender, you won't be able to change this behavior for your mailbox: domain settings always override mailbox settings.
