

SSH access

For security reasons, the Storage servers are only reachable via SSH with keys (and not with a password). To access to your server you have to start by adding the key(s) you want to use.

Once a key added to your server, you can access it by the standard way:

```
> ssh username@tabarly.hosterra.tech
```

The diagram shows a 2D hexagonal lattice. A central square is highlighted with a larger, bold border. The lattice is composed of small squares arranged in a hexagonal pattern. The side length of the hexagonal unit is labeled 'a', and the distance between adjacent squares is labeled 'b'.
